Project 5.2 Team Plan

The two of us did the majority of the project via pair programming. We met for four hours on 11/4 and planned our initial design together. Cedric began programming the View component based on our Lab 4 code; Ahsan referenced JavaFX documentation and followed along, giving suggestions and corrections. Halfway into the initial meeting, Ahsan took over programming on Cedric's laptop, and continued work on the View component.

We met for six hours on 11/5 and completed most of the implementation. We pair programmed at first, completing the majority of the View functionality as well as the look method. For the later part of the meeting, we programmed individually and implemented the look functionality into our individual Critter classes. Cedric fixed bugs in the JavaFX thread while Ahsan modified the displayWorld method to work according to the specification.

After that meeting, we individually worked on debugging and UI refinements. We met on 11/7 to discuss and implement changes. Finally, we prepared the project for submission. Ahsan wrote documentation while Cedric completed changes to the code.
